

Nikhil Ravi

nr337@cornell.edu | (480) 516-8305 | New York, NY | [linkedin.com/in/nikhil-ravi](https://www.linkedin.com/in/nikhil-ravi)

Doctoral student with research experience in complex networked dynamic systems, with a focus on energy systems. Advanced understanding of linear algebra, statistics, stochastic processes, optimization, and probability theory. Skilled in time-series predictive modeling, causal inference, and hypothetical testing. Looking for full-time data science/quantitative research roles starting May 2023.

SKILLS

Programming: Python (NumPy, pandas, scikit-learn, statsmodels, sphinx, plot.ly, folium, Streamlit, TensorFlow/PyTorch), MATLAB, R, GCP, Django, REST API, Git, LaTeX, SQL.

Personal Projects: Django-based Pokémon Trading Card collection tracking webpage, LastFM analytics tool for song recommendations.

EDUCATION

Cornell University

Ph. D., *Electrical and Computer Engineering*

Expected in May 2023

New York, NY

- Research Assistant; *Dissertation*: “Differentially Private Smart Grid”; 3.97/4.0 GPA.
- Awarded the 2022 *PiTech Impact Fellowship* at the City of Ithaca’s Green New Deal Program.
- Relevant Coursework*: Statistical Machine Learning, Applied Probability and Stochastic, Reinforcement Learning and Optimal Control, Distributed Optimization, Bayesian Methods in ML, Causal Learning and Inference.

Arizona State University

M.S., *Electrical Engineering*

August 2021

Tempe, AZ

- Research Assistant, *Thesis*: “Decentralized Optimization in Adversarial Environments”, GPA: 4.0/4.0.
- Received the 2021 *Ira A. Fulton Schools of Engineering Graduate Fellowship*.

PES Institute of Technology

B.E., *Electronics and Communication Engineering*

May 2017

Bangalore, India

- Graduated with Distinction, First Class; 9.9/10 GPA.
- Awarded the *Prof. MRD Scholarship* and the 2015 *Indian Academy of Sciences Summer Research Fellowship*.

WORK EXPERIENCE

Kevala, Inc.

Data Science Intern

May 2022 – August 2022

New York, NY

- Developed a deep reinforcement learning-based tool on GCP Vertex AI to maximize batteries and plug-in electric vehicles’ electricity price arbitrage value via charge schedule optimization, based on electricity price, solar irradiation, and load forecasts.
- Built a pipeline to ingest day-ahead and real-time market electricity prices into Google BigQuery.
- Developed a methodology to estimate feeder-level electricity generation carbon social prices.
- Created data visualization dashboards using Streamlit, translating complex data sets into comprehensive visual representations.
- Researched and published an internal blog on the use of racial features in BESS adoption models.

Lawrence Berkeley National Laboratory

Research Intern

May 2021 – August 2021

Remote, USA

- Developed a pipeline to ingest and clean large time-series AMI data of an electric ISO’s consumers onto a PostgreSQL database.
- Designed algorithms to publish differentially private summary statistics about consumer energy data.
- Proposed a differentially private clustering algorithm to classify consumers and generate typical average load shapes of houses.
- Developed a differential privatized cyber-physical attack detection methodology for SCADA systems.

Arizona State University

Graduate Research Assistant

August 2017 – August 2021

Tempe, AZ

- Designed the Electron Volt Exchange, a secure Hyperledger Fabric-based distributed ledger for Transactive Energy.
- Proposed a distributed optimization algorithm to verify users’ compliance with power schedules and to mitigate the impact of false data injection.
- Developed gradient-based edge-cutting mechanisms to build Byzantine fault-tolerant decentralized optimization algorithms.
- Designed an algorithm to infer socioeconomic preference from crowd movement dynamics data.
